

Containing Illiberalism: The U.S.-India Partnership and the Ukraine War

Harry Verhoeven

November 18, 2022

The Russia-Ukraine conflict is leading analysts to rethink the fault lines of global politics. Speculation is rife about how Vladimir Putin's invasion will reshape international relations. In U.S. policy circles, there is palpable relief after the forging of a bipartisan thrust to isolate the Kremlin, especially because Europe has closely aligned itself with Washington's outlook. Confronting Russia is a familiar scenario for North Atlantic strategists, allowing NATO to rediscover its *raison d'être* and sparking renewed confidence as commentators discern a "[revival of the West](#)". The implications of the latter go beyond Ukraine: The Biden administration has sought to bring North American

sympathizers in India, liberal democracy seems to have a dwindling number of domestic Indian supporters, too, as India's political institutions, media, and judiciary are failing beleaguered minorities — especially its tens of millions of Muslim and Christian citizens. Within the Hindu nationalist movement, Putin's combination of ruthless personal leadership, strident conservatism in the face of Western “moral relativism,” and the prioritization of top-down state-building has found many admirers. The [#IStandwithPutin hashtag trending on social media](#) is but the latest example. Delhi's attachment to either liberal democracy or liberal internationalism runs increasingly thin of late.

The realities of [the fragility of the U.S.-India partnership](#) in view of divergent understandings of the sources of political order, domestically and internationally, warrant critical reflection. What compromises is Washington willing to accept in pursuit of regional alliances to contain Russia and China? During the 20th century Cold War, successive administrations showed themselves willing to overlook the dismal democratic and human rights record of many American allies in the name of arresting Soviet advances. That period is littered with illustrations of how Washington's preoccupation with global bipolarity blinded it to disturbing local and regional realities and generated blowback — such as Iran's Islamic Revolution or the rise of Al-Qaeda from the rubble of Cold War fighting in Afghanistan. From Zaire to Indonesia, U.S. allies exploited their privileged relations with Washington to get away with muzzling opponents and marginalizing minorities. This was ethically troubling and hurt America strategically, as it undercut the United States' credibility as a liberal hegemon. The inconsistencies of that period still inform how African, Asian, and Middle Eastern publics perceive U.S. foreign policy today.

While the challenges posed by Putin's Russia and Xi's China are considerable, the risks of repeating Cold War mistakes, in the relationship with Narendra Modi's India and elsewhere, are plentiful. Especially in the Indian Ocean region, which has a [long and complex history with liberal order, as colleagues and I document in a new book](#), Western governments should recognize how much damage was done by the contradictions between encouraging democratization and the cynical *realpolitik* that abandoned human rights. Some will argue that today's geopolitical interests are too significant to allow much historical nuance in foreign policy vis-à-vis India and other Indian Ocean states. But managing alliances without downplaying the problems posed by the partners' illiberalism is precisely a question of strategic stakes and not just moral ones.
